

# PIT BOSS II™

## Plunger Lift Controller

The PIT BOSS II™ and PIT BOSS II Plus™ are the next generation of premium, results driven Plunger Lift Controllers offered by PIT.

### PIT BOSS II™

- CSA Class 1 Zone 0, Group II
- Standby Time of 6+ months
- Supports 1-2 Valves
- Cycle History of last 25 cycles
- Daily History Current Day + Previous Days
- Operating temperature of -40°C - +70°C
- Can be configured as a simple well intermitter or used in conjunction with a plunger arrival sensor.
- Shut in on High Line Pressure using a Line Pressure device.
- Fast Trip feature prevents repetitive fast plungers.
- Will run for more than 3 months without solar power.
- Easy to read display panel
- Designed to handle the harshest environments

### PIT BOSS II Plus™

- Standby time of 8+ months
- Supports 1-3 Valves
- All of the features offered by the PIT BOSS II
- Timer Optimization feature that allows the controller to react to average velocity of the plunger and make changes to the amount of static and afterflow time for the well.
- Uses a combination of Line Pressure, Casing Pressure, and Flow Differential Pressure to optimize the well.
