

PaceMaker

The PIT PaceMaker Plunger Lift System utilizes a proven, patented, two-piece plunger design. The large bypass area of the plunger, coupled with high strength materials and other proprietary system components, allows production companies to increase production and recoverable reserves. Plunger and Ball combos are available in titanium, steel, and other specialty materials. Fluid and gas rates determine plunger length and weight requirements.

- **Removes more wellbore fluid by making more trips per day**
- **Provides a deliquification solution for slim-hole, tubingless and packer completions**
- **Broadens the application of plunger lift technology to benefit wells that are above critical rate**
- **Virtually eliminates the need for any shut-in time**
- **Works well with onsite compression**
- **Operates with minimal bottom hole pressure**
- **Eliminates line pressure spikes**
- **Maintains a low flowing bottom hole pressure**
