PIT BOSS

“PRIVATE EYE”

The “Private Eye” was primarily designed for remote operations and poor or marginal oil or gas wells that may not require a daily visit by operations. Users can evaluate remotely by having a “Red / Green” status menu and avoid costly drives or other safety concerns with the ability to view photos, pressures, flow, or any other variable from any of today’s smart devices. (phone, tablet, etc.)

NOTES:
1. THIS DRAWING IS FOR DEPICTION PURPOSES ONLY.
2. ALL HOSE CLAMPS/BANDING ARE SUPPLIED BY OTHERS

- The Private Eye system allows for a quick glance view of basic detection of Flow, Pressure, Possible Leaks, to determine if a visit is required especially in poor conditions.
- Users can program scheduled photos day or night and send a command to the PitBoss at anytime for a live photo of your assets.
- Can be adapted for several uses. (Wellheads, Pumpjacks, Tank Farms, Gate entries, Buildings, Agricultural Operations, Surveillance, Heavy equipment operations, etc.)
